

# ABSTRACT OF THE DISCLOSURE

A multiple functional vacuum cleaner has a main casing, a head casing disposed on the main casing, a lower container disposed on the main casing, a handle connected to the main casing and the head casing, a pressing button, and a spring. The head casing has a front mouth, a soft plastics pad, a filter net, and a rear insertion plate. A sucking pipe is connected to the front mouth. A dust extractor fan is disposed in the main casing. An inflator device is disposed in the main casing. The main casing has an upper front chamber, a rear opening, and a rear inner flange. The upper front chamber of the main casing receives the pressing button and the spring. An illuminator device is disposed in a rear portion of the main casing.
